Description

Are you ready to launch your innovative product with complete confidence in its compliance and market success? Our service offers a thorough assessment of all necessary steps to ensure your product meets the latest standards, laws, and directives. We will guide you through the regulatory landscape, identifying the specific rules applicable to your product and providing tailored advice on how to adapt your innovation to meet these requirements. Unsure if current laws cover your groundbreaking idea? We will also investigate whether new regulations are needed to support your innovation's potential. In addition to compliance, we provide a comprehensive range of supplementary services that AgrifoodTEF can offer to further accelerate your success. From testing and validation to expert guidance on market strategy, we are here to support you every step of the way.

How can the service help you

Introducing an AI or robotics product to the agricultural sector comes with distinct challenges, particularly in navigating complex regulations and industry standards. Our service is specifically designed to help innovators in this field confidently overcome these obstacles.

How the service will be delivered

Specifics of the Provided Service: In this service, agrifoodTEF will facilitate the following:

- Workshops: Collaborative workshops involving experts from RISE and representatives from the customer's team will be conducted. At least one workshop will be held in person, while subsequent sessions can take place online.

Service customisation

This service can be tailored to meet the specific needs of each customer. The assessment journey begins with a collaborative meeting, where the customer engages with a technical team from agrifoodTEF, including specialised experts from RISE or Asta Zero. The customer's team will also be present to help guide the process.
