Type of service

Performance evaluation

Description

Install your robotic or AI solution on a real vineyard to assess their performance or to foster their development with storage and workshop facilities

How can the service help you

This service supports producers who have a new product to develop, and no vineyard to implement it.

We provide fields with a great variability in terms of grape varieties, soil's conditions, slope, and we give producers access to our workshop and expertise to support them in taking the right direction.

How the service will be delivered

Service customisation

This service is delivered after having agreed on the logistic, the length (from one day to months), the facilities which will be used, and the producer's requirements in terms of: number of fields, access to the workshop, access to electricity, access to offices, access to meeting rooms. It can be delivered all year long, unless the producers in question need leaves on the vines for their specific application. For insurance purposes they must declare the value of the equipment that will be stored in IFV facilities.
